Department of Information Technology (B.Sc.I.T Semester V)
Artificial Intelligence Practical – III

Name :- Nidhi Yadav	Roll No:- T053
Class :- TYIT	Batch :- 02
Date of Assignment :- 019/09/2026	Date of Submission :- 01/09/2026

3A Create and configure Issue Types (Epic, Story, Task, Bug)

Step 1:- Open Jira

- 1)Open Jira.
- 2)Login to your Jira account.
- 3)Open the FSP (Full Stack Project) project.

Step 2: Open FSP Board

- 1)Open the FSP Board.
- 2)The board will open in Kanban view.
- 3)You will see columns such as:

Backlog

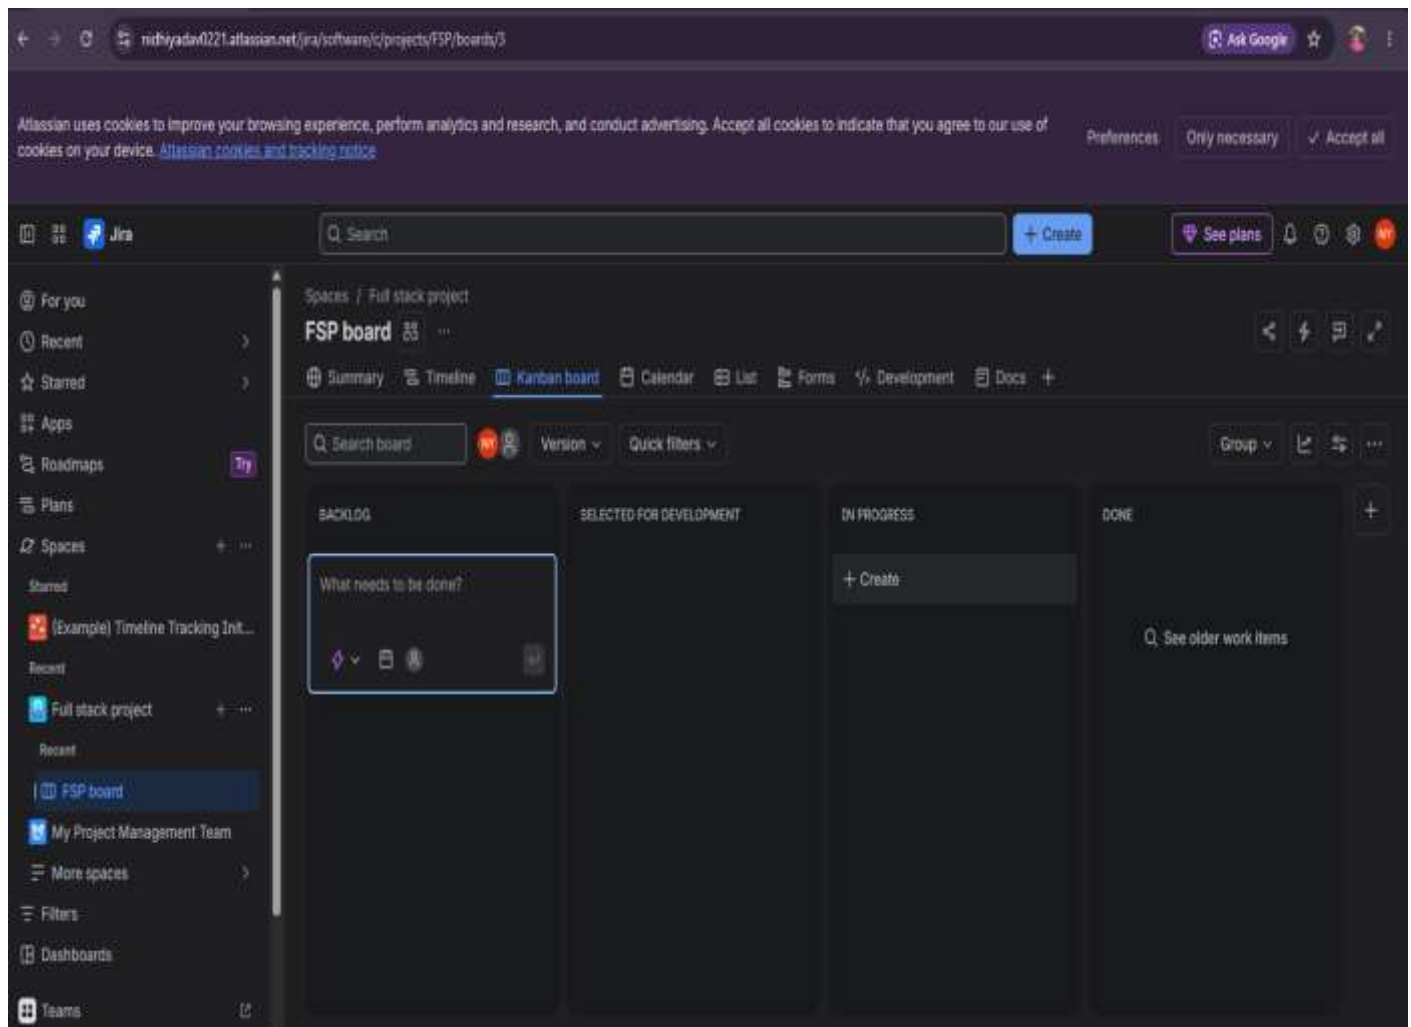

Selected for Development

In Progress

Done

Explanation:-

A Kanban board visually represents project work and shows the current status of each task.

Step 3:- Open Backlog

- 1)Open the Backlog.**
- 2)Click on Create.**
- 3)A new issue card will appear.**
- 4)You will see the field “What needs to be done?”**

Explanation:-

The Backlog contains tasks or work items that are yet to be completed.

Step 4:- Enter Work Name

- 1)Click inside “What needs to be done?”**
- 2)Enter the name of the work.**
- 3)Example: Team Interaction**

Explanation:-

The work name describes the activity that needs to be performed.

Step 5:- Select Issue Type

- 1)Click the Issue Type drop-down/icon.**
- 2)Different issue types will be displayed.**
- 3)Common issue types are:**

Epic – Large body of work.

Task – A specific piece of work.

Bug – A problem or error in the project.

Step 6:- Create a Task

- 1)Select Task from the Issue Type list.**
- 2)Enter the task name.**
- 3)Example: Team Interaction**
- 4)Click Create/Enter.**
- 5)The Task will appear as a card in the Backlog.**

Explanation:-

A Task represents a normal activity that needs to be completed.

Step 7: -Create a Bug

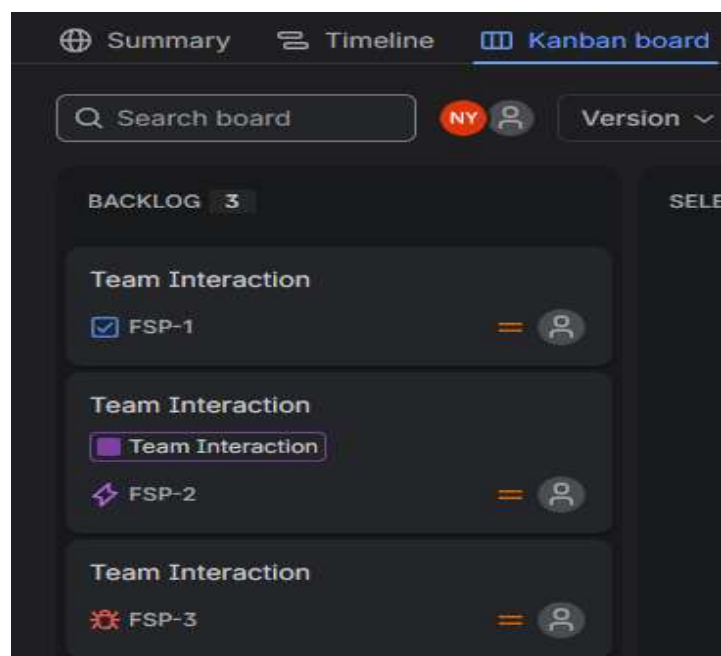

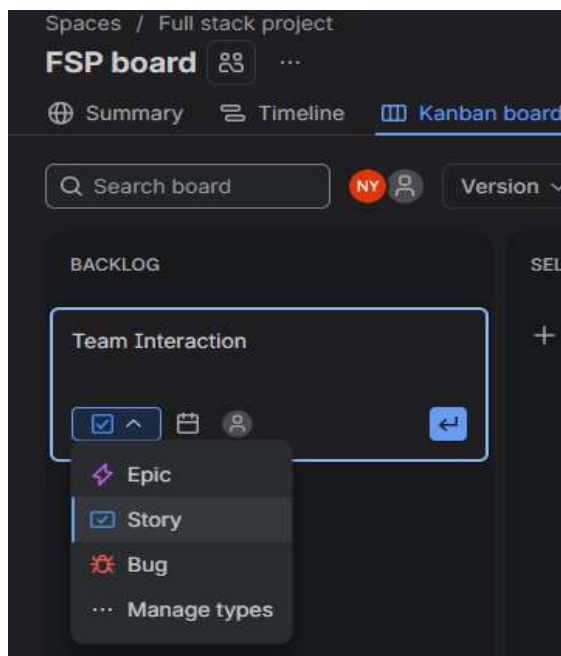

- 1)Create another issue.**
- 2)Click the Issue Type option.**
- 3)Select Bug.**
- 4)Enter the bug name.**

Example: Fix Homepage

- 1)Click Create/Enter.**
- 2)The Bug will appear in the Backlog.**

Explanation:

A Bug is used to record an error or problem that needs to be fixed.

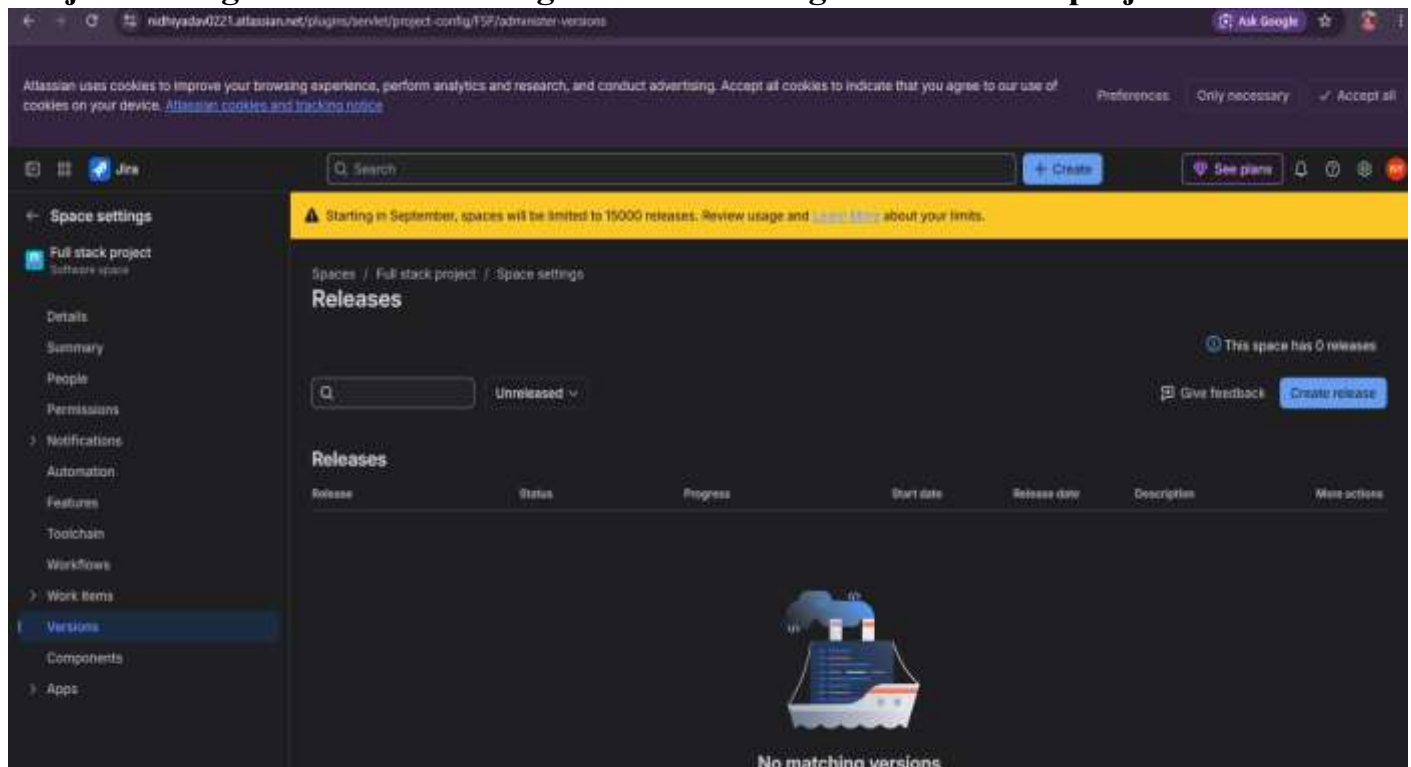

3B Create Components and Versions.

Step 8:- Open Project Settings

- 1) Open the FSP project.
- 2) Go to Project/Space Settings.
- 3) Open the settings related to project management.

Explanation:

Project settings are used to manage different configurations of the project.

Step 9:- Create Release/Version

- 1) Open the Versions/Releases section.
- 2) Click Create Release.
- 3) Enter the required details.
- 4) Click Save.

Explanation:-

A Release/Version identifies a particular version of the project.

Create release ✕

Required fields are marked with an asterisk *

Release name *
version 1.0

Start date 9/2/2026 Release date 9/5/2026

version 1.0 created.

Step 11: -Open Components

- 1) Go to Project Settings.
- 2) Select Components.
- 3) Click Create Component.

Explanation:-

Components divide a project into different modules or parts.

Step 12:- Enter Component Details

- 1) Enter the required component details.
- 2) Provide the component name.
- 3) Click Save.

Explanation:-

Saving the details creates a new component in the project.

Step 13:- Check Component List

- 1) Open the Components section.
- 2) Check the Component List.
- 3) The newly created component will appear in the list.

Explanation:

The Component List displays all components created in the project.
